"I remind you that my client is nice"

The One Business Strategy That Can Change Your Life

I believe there is one skill that is more critical to your business success than any other skill or talent you could possess. Once mastered, it will not only improve your sanity and life, but also your ability to grow your business faster and more profitably. It also happens to be one of the most difficult skills to master. What is it?

Investing Your Time Wisely

After all, what could impact your business greater than investing more time on growth, profitability and revenue generation? But time is the great equalizer and no one person can manufacture more of it. And while we all know that “time is money,” very few entrepreneurs actually understand the TRUE value of their time and treat it with the respect and value it deserves.

To prove my point, let me ask you a question: Do you really know what your time is worth? I’m not talking about market place value as in how much you could charge someone for an hour of your time. I’m talking about the value of your time being based on how much you can leverage your ideas, talents, and assets to make money.

Consider this: Over the last week, how much of your time did you spend doing things that you could have hired someone else to do for you? How much time did you spend on tactical, day-to-day mundane activities, putting out fires, or dealing with problems that could have (and should have) been outsourced or delegated?

Are You Guilty Of This As Well?

Lee Iacocca believed that the average CEO only invested 45 PRODUCTIVE minutes per day working on their business – the rest of the day was uselessly spent fighting off time-wasting activities similar to a panicked person swatting frantically at an attacking swarm of angry bees (obviously, not the highest and best use of any CEO’s time).

So why am I, a computer consultant, writing you about the value of your time? Because as a business owner myself, I want to urge you to rid yourself of one major area of frustration and time-wasting activity that we can do for you cheaper, faster and better -- specifically, the support, troubleshooting and maintenance of your computer network. Let me explain...

Creating Guest Accounts For Visiting Relatives

The holidays are right upon us and there's a good chance some of your relatives will want to use your computer while visiting. If you want to give them access but don't want them viewing your personal files, then you'll need to set up a guest account. This will give them access to your programs, but not your personal files. Here's how...

(Windows XP)

1. Open User Accounts in Control Panel.
2. Click **Guest**.
3. Click **Turn On the Guest Account**.

(Windows Vista)

1. Click on the **Start** button, Open Local Users and Groups, then type **lusrmgr.msc** in the search box, and press ENTER. If you are prompted for an administrator password or confirmation, type the password or provide confirmation.
2. Click **Users**, and then double-click **Guest**.
3. Select or clear the **Account is disabled** check box

(Windows 7)

1. Go to the Control Panel and open up **User Accounts and Family Safety**.
2. Click **User Accounts**, choose **Manage another account**, then either create a new account, or select an existing one.
3. Hit Set up **Guest Mode** and select **Turn on Guest Mode**

Windows 7 Guest Mode also further protects your computer by preventing someone from installing software, making system changes, and deleting data. And if problems do arise, Windows 7 can revert your system back to how it was before your guest got their hands on it.

E-mail, databases, software, web sites, access to the Internet, and any other number of technologies you use in your business are critical tools that you rely on day in and day out. If these tools stop working, all productive work in your business can come to a grinding halt. BUT, it shouldn't be YOU that worries about getting them fixed.

You'll take twice as long to get it done and you're probably not going to fix it right anyway.

So What Are Your Options?

- **Option #1:** Designate the most technically-savvy person on your staff to be your make-shift IT manager and only bring in outside help when your "internal guru" runs into a network crisis they can't solve.

Problem is, you are pulling this person away from the real job you hired them to do; AND unless they have the time to stay up-to-date on the latest developments in IT support and management, they don't have the skills or knowledge required to properly support and secure your network.

- **Option #2:** Use your network until it "breaks" and then call in the experts to repair or replace whatever stopped working. This reactive model of network maintenance is a surefire path to extensive downtime, lost data, and excessive spending on IT support, not to mention **major disruptions in staff productivity, sales, cash flow, production, and customer service that can never be recovered.**

If you currently don't have us performing regular maintenance on your computer network, I can virtually guarantee that your computer network will end up being one of those "angry bees" that shows up on a regular basis to distract you from focusing your time and attention on the more important aspects of growing your business.

FREE Report Shows You How To Claim More Time To Focus On Revenue Generation

To find out how we can simplify your life and give you one less thing to worry about, download our free report titled, "**An Overlooked Way For Small Business Owners To Lower Their IT Costs By 30% - 50% While Avoiding Expensive, Productivity-Killing Computer Problems**" This report will be made available for a limited time on our web site:

Happy Holidays!

Holiday Numbers

1,000 – The number of Christmas cards printed in England in 1846, the first year Christmas cards were commercially available.

25,000 – The number of light bulbs strung on the Christmas tree at Rockefeller Center in New York.

50,000,000 – Total number of Christmas trees sold in Europe each year.

431 – Average dollar amount each person will spend on holiday gifts.

32 – The number of countries around the world that celebrate Christmas.

1 – Number of times you can be “naughty” during the year without getting coal in your stocking.

Thanks For The Kind

Words... “Wow! You guys are good! I was having problems with what I thought was a simple printer connection problem. You were here within 10 minutes and had me printing again within 20 minutes. I had a lot of printing to do for a seminar tonight. BSSI is a refreshing departure from what we're used to.” – Beth, Jarvis Law Firm

FREE iPod For Your Referrals

That's right! During the month of December, refer a friend to us; if they become a client, we'll send you a shiny new iPod, already gift-wrapped and ready to go.

Do You Know The Difference Between A Virus, Worm, Or A Trojan?

A **computer virus** is a malicious program that attaches itself to another program or file with the intent of spreading or replicating itself. Some viruses cause only mildly annoying effects while others can completely destroy your hardware, software, and files. Almost all viruses are spread by executable files attached to an e-mail. Unless you run or open the program, a virus cannot infect your computer. That is why you should NEVER open a strange-looking e-mail from an unknown source.

Like viruses, worms spread from computer to computer; but unlike a virus, a **worm** has the ability to take advantage of your computer's file or information transport feature to spread without human assistance. This is why worms are so dangerous. Left unchecked, a worm could send out thousands of copies of itself from your computer, creating a devastating ripple effect. For example, many worms will access your e-mail address book and send a copy of itself to everyone you have listed. If it is able to install itself on the recipient's machine, it performs the same broadcast to everyone in their e-mail address book, and so on down the line.

Because of the copying process they initiate, worms use up system memory and network bandwidth causing Web servers, network servers, and individual computers to stop responding. In some cases, like the Blaster Worm disaster, a worm can actually allow malicious users to control your computer remotely.

A **Trojan Horse** received its name because of the way it tricks users into installing it on their computer. To an unsuspecting user, a Trojan Horse will appear to be useful software or files from a legitimate source. Once activated, the damage can be mildly annoying (like adding silly icons to your desktop) to outright devastating (deleting files and destroying information on your system).

In addition to damaging files and destroying information, Trojans are known for creating an entry point that allows outsiders to access your system and possibly even steal confidential, financial, and personal information. Unlike viruses and worms, Trojans do not reproduce by infecting other files and do not self-replicate.

How To Protect Yourself From Getting Infected

Since new threats are developed daily, it's important to stay vigilant about keeping your computer or network's security current. The most obvious line of defense is up-to-date virus protection that has the ability to scan and clean inbound and outbound e-mail messages. Next, make sure you have the latest security patches and updates installed for your operating system, especially if you are running Microsoft Windows. You should also have a software or hardware firewall installed.

Finally, modify your browsing habits. Do not click on pop up ads, download “cute” screen saver programs or emoticons, and never participate in peer-to-peer network download sites.

FREE 101-Point Problem Prevention Audit (\$297 Value)

Our 101-Point Problem Prevention Audit will protect you by revealing any lurking virus, worms or Trojan threats in your network. We'll also check your backups and give you recommendations for improving the speed and performance of your systems. To schedule yours, call 740-681-9753 or email me at dspurgus@bssi.biz.

Great Technology Gift Ideas Under \$100

iPod Remote Control

From up to 30 feet away this device will allow you to forward or advance songs, adjust the volume, and even pause your music. Simply plug the transmitter into your iPod, place it down and attached the water-resistant remote control to your arm.

One drawback: You can't scroll through your music collection. You can, however, advance or rewind playlists or albums.

Pre-Paid Cell Phones are another great gift idea that can help your loved ones stay in touch. No new concepts here, but these phones are easy to purchase and provide one-size-fits all experience to its users.

Digital Cameras. Even with the ability to take pictures with cell phones, digital cameras are still a big hit around the holidays. With features like a real view finder (so you can power off the LCD screen and save battery life) this gift gives you hours of family picture fun.

i-Fish. Similar to last year's i-Dog, this plastic robotic-fish-turned-iPod-speaker has a bunch of entertaining tricks, like reacting to sound or music, and "swimming" all over your desk.

The Perfect Gift For The Business Owner Who Has It All

Trying to shop for a busy business owner who has it all? How about a BSSI gift certificate?

Your relative or business associate may use the gift certificate to purchase new hardware or software for their business, to cover an onsite service call or project, or may apply it towards our IT EZ Support Plan.

Certificates may be purchased in minimum amounts of \$50 each and have a one year expiration date.

Call 740-681-9753 now to order your BSSI gift certificate.

Client Spotlight: MR Medical Billing Service

MR Medical Billing has outsourced the management of their computer system to our organization as they have found we are a good steward of their resources. If you are a medical specialty organization looking for someone who can take the headache out of your medical billing and management needs, contact MR Medical Billing, Logan, Ohio.

Would you like your company highlighted here in our "Client Spotlight?" Then give us a call today at 740-681-9753

"Who Else Wants 4 Free Movie Tickets?"

Take our monthly Trivia Challenge and you could win too!

The Grand Prize Winner of last month's Trivia Challenge Quiz is...drum roll please: Wendy Curtis, Stebelton, Aranda & Snider was the first person to correctly answer our quiz question...

What size was the largest farm-raised turkey on record?

- a) 52 lbs. b) 124 lbs c) 86 lbs d) 12 lbs

The answer is c) 86 lbs

Congratulations Wendy Curtis, Stebelton, Aranda & Snider, you've won 4 free movie tickets! Now, here's this month's trivia question for 4 free movie tickets to Regal Cinemas.

Though the Chinese invented the concept of paper in 105 AD, who invented the *wrapping paper* that is used today in the United States?

- a) Don Featherstone b) WH David c) Wu Yulu d) Joyce C. Hall

Call us right now with your answer! 740-681-9753

Please Welcome Our Newest Clients And Friends!

I'm thrilled to welcome our newest clients into our company! I want to extend a sincere "thanks" for the trust and confidence these clients have shown in us:

Hocking County Coroner's Office

Referred to us by Dr. David Cummin.... Many thanks, Dr. Cummin!
